# SGLang Evolution Brief

Official-release evolution through 2026-11-03 · latest stable: v0.5.23

## One-line conclusion

SGLang evolved through release-documented engine, scheduling, model-support, and distributed-serving changes. This brief only summarizes official-source evidence.

## Release evolution timeline

| Stage | Representative releases | Architectural transition |
|---|---|---|
| Runtime foundation | v0.1.5 – v0.1.20 | OpenAI-compatible serving |
| High-performance engine | v0.2.0 – v0.3.6 | Chunked Prefill |
| DeepSeek and distributed serving | v0.4.0 – v0.4.10 | DeepSeek V3/R1 optimization |
| Platform and hybrid models | v0.5.1 – v0.5.9 | HiCache |
| Production architectures | v0.5.10 – v0.5.23 | Elastic EP |

## Engine path · scale path · model path

Engine: release-documented execution, compilation, and kernel changes. Scale: release-documented parallelism and disaggregation changes. Models: release-documented dense, MoE, multimodal, speech, and hybrid-model support. Consult configured official documentation for current architecture details.

## Key version milestones

| Date | Release | Official source |
|---|---|---|
| 2024-01-18 | v0.1.5 | https://github.com/sgl-project/sglang/releases/tag/v0.1.5 |
| 2024-05-14 | v0.1.16 | https://github.com/sgl-project/sglang/releases/tag/v0.1.16 |
| 2024-07-26 | v0.2.5 | https://github.com/sgl-project/sglang/releases/tag/v0.2.5 |
| 2024-12-04 | v0.4.0 | https://github.com/sgl-project/sglang/releases/tag/v0.4.0 |
| 2025-04-27 | v0.4.6 | https://github.com/sgl-project/sglang/releases/tag/v0.4.6 |
| 2025-09-12 | v0.5.2 | https://github.com/sgl-project/sglang/releases/tag/v0.5.2 |
| 2026-01-01 | v0.5.7 | https://github.com/sgl-project/sglang/releases/tag/v0.5.7 |
| 2026-06-13 | v0.5.13 | https://github.com/sgl-project/sglang/releases/tag/v0.5.13 |
| 2026-08-22 | v0.5.18 | https://github.com/sgl-project/sglang/releases/tag/v0.5.18 |
| 2026-11-02 | v0.5.23 | https://github.com/sgl-project/sglang/releases/tag/v0.5.23 |

## Deployment takeaways

Why SGLang: release-documented serving and scaling evolution. What to manage: version cadence, model/hardware compatibility, cache and parallel settings, and migration notes for defaults/deprecations.

Sources: official GitHub Releases and configured official documentation. Cutoff 2026-11-03; source mode live.
